RE: Requested changes to College and High School XML Schemas

On behalf of our members and system users, EducationPlannerBC supports the changes requested by the Canadian PESC Users Group.

PESC's standards are integral to the operations of our data exchange process. As the provincial data exchange hub, it is important to have standards to ensure that all high school and post-secondary transcript data exchanged through our system can be equally sent and received by our institutions and partner organizations. The data exchanged through our system are formatted using PESC's standards, and ensuring those standards reflect the specific data elements is essential. The requested changes will allow our institutions to reflect their students' academic achievements more accurately in the electronic record and provide more clarity for receivers of records.

We are proud to contribute PESC's work to establish and adopt trusted, free, and open data standards across the education domain.

Sincerely,

A handwritten signature in blue ink that reads "Karen McCredie".

Karen McCredie  
Executive Director
