

Minutes
PESC TAB Meeting
4/21/2011

Attendees

Tuan Ahn Do
Paul Fawver
Jam Hamidi
Steve Margenau
Michael Morris
Gideon Sanstra

Discussion:

1. Michael announced that he and Gideon had extended an invitation to NIEM director Anthony Hoang and his staff to attend the TAB to discuss technical approaches to schemas
2. We discussed the need to finalize the language attribute enumeration and submit to the CCB for inclusion in core-main library.
3. Jam presented the dynamics of web service security to demonstrate the rapid change in security standards for web services and why we should avoid specifying web service security as part of our service definition
4. We discussed the edu1world site and Gideon indicated that he had a good list of issues. No one knew what PESC's agreement with edu1world, but we should ask Michael Sessa what kind of leverage we have with them. Jam suggested that we should have better annotation ability with documents.

Decisions:

1. We will not provide web security as part of our web service recommendation, but we will work with the EA2 workgroup to determine synergies

Actions:

1. Jam will develop a proposal for a PESC web service definition that will be discussed at the 5/3/2011 conference call.
2. Steve will develop a schema to be submitted to the CCB that will include a global language attribute and a type definition. The creator of the attribute may then declare `<xs:attribute ref="core:language"/>` within any element that needs language attribute. Steve will present this material at the 5/3/2011 conference call
3. Gideon will develop a recommendation on the use of edu1world including the issues we have had with the site. We will discuss this recommendation at the 5/3/2011 meeting.
4. Michael will send out the presentation that he developed for the PESC Spring Data Conference.
