Minutes
PESC TAB Meeting
4/14/2011

Attendees

Tuan Ahn Do
Jam Hamidi
Steve Margenau
Michael Morris

Discussion:

1. We discussed the various feature of DTS including routing and security. Much of this work is done in the SOAP Header instead of using web service methods and hiding the specific technology.
2. Michael presented the revised proposal for documenting schemas for automated import into instance documents and the Registry and Repository. He also explained how additional xslt validation was needed since the xsd engine would not validate the tags under xs:documentation. Tuan suggested that we add a submission date to the documentation section.

Decisions:

1. We deferred the discussion of edu1world until Gideon could participate.

Actions:

1. Jam will determine if any of the functions of DTS need to be added the current web service proposal. He will update the proposal for web service standard
